

Information valid for DIZ-G and DIZ-H

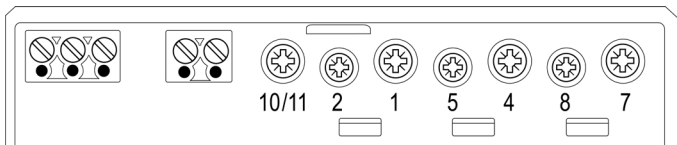

The digital industrial meters DIZ-G and DIZ-H in direct connected version are optionally available with voltage tap via terminals 2, 5 and 8.

Additional devices can be supplied via this voltage tap.

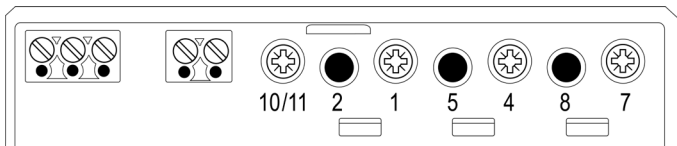

By supplying the variant without terminals for the voltage tap, EMH metering takes into consideration the current situation in the supply chains.

The following figures illustrate the differences.

Connection area of a direct connected 4-wire meter **with** voltage tap on terminals 2, 5 and 8 (front view):

Connection area **without** voltage tap:

Connection diagram for 4-wire version, direct connected **without** voltage tap
